EPA HARVEY:

Throughout the weekend, EPA staff assessed public water supplies, wastewater treatment facilities, Risk Management Plan (RMP) and Facility Response Plan (FRP) facilities for damage and immediate ongoing releases. EPA personnel deployments to Austin, Beaumont-Port Arthur, Houston and Corpus Christi will continue throughout the weekend. Personnel will be supporting the Unified Command teams that are identifying and evaluating impacts of the hurricane and floods, as well as coordinating with TCEQ to assist with priority drinking and waste water assessments. EPA is working with TCEQ to issue a statement on the hazards of floodwaters. Assisting drinking water and wastewater facilities in maintaining and/or resuming their operational status remains a high priority.

EPA continues to conduct ambient air monitoring in Houston, and is currently evaluating an area of potential concern associated with a Valero facility in Houston. EPA's Trace Atmospheric Gas Analyzer (TAGA) arrived in Houston and will be operational tomorrow. On September 1, EPA deployed two container recovery teams to Corpus Christi that will be collecting orphaned containers where hazard evaluations have been completed.

EPA IRMA:

EPA is preparing for Hurricane Irma now, closing down offices in the storm's path and putting out communications in English and Spanish about ways to prepare. We are working on an Agency statement showing our preparations, including securing superfund sites.

Good afternoon,

If your agency has not already done so, please send us **one paragraph**, 3-4 sentences, on what your agency has done to support Harvey and a separate paragraph on your Irma preparations. Please imbed hyperlinks into your paragraph and send **as soon as possible**.

Thank you again if your agency has already sent your paragraph and thank you all for your continued collaboration.
